

NOEL4TECH

Good Morning! I'm Noel and want to be the next JCR Tech Officer. I'm a pretty big fan of Halls. It's almost the perfect place to live as a Trinity student. Besides the salty pricing, there's a few things that I will do that'd make life here a little cooler.

1.

Walking to Trinity! With me as Tech Guy, there will continue to be daily walks to Trinity. The biggest challenge of Halls is living by yourself. Rhythms get lost, days get bad, people get lonely. Alas, there is hope. With the WATTI Initiative (proudly sponsored by Lidl), every day has a good start.

2.

Events for everyone! There are too few events focused on board-, role-playing- and console-gaming. In collaboration with the Ents Office, I will make sure that we get monthly* events focused on bringing more people out of rooms into fun settings. Why isn't there board game Sunday yet??

3.

Let's talk WiFi and Printing. I'm going to create a short video series on how to get setup with *Tech at Trinity*. There is going to be a short video on connecting to WiFi (with instructions for EVERY type of device!), an introduction to printing and on getting comfortable with Computer Rooms.

4.

Finally, a tech club! There should be a club focused on side-projects. Halls will be a place to collaborate on fun websites and to learn about the basics of programming (for non-techies). Tech club is the place to go for help with anything techy and the place to stay for socialising, learning and creating.

A little about myself

I'm a German guy studying Maths!
Maybe should've done Comp. Sci, but I feel like Maths is a much sexier subject. I'm quite antipatriotic, have strong opinions on toastiness of bread and occasionally create YouTube videos about techy things I make on my small Channel.

You're a Hacker, Noel!
Been programming for a while, have some cool projects on my GitHub. Some examples: an online terminal emulator (my website!), a city/covid simulation (won some science competitions and good money!), MultiGolf (a very fun multiplayer minigolf game played in Real-Life) and so many more. Made many Websites, won a Hackathon (HackTrinity) recently (HR-Codes!) and am always working on some friendly side project.

I'm an experienced Volunteer!
I'm an English tutor for Refugees and give Tech Support to Refugees in Germany. In School, I was Head of the Student Council and organized events, fundraisers and took part in regional politics. I've also completed two internships; one at the vice president of the parliament of my German State and another as a ML Engineer at Volkswagen.
