

Technology should be central to any organization in the modern world. While this should be self-evident, IT systems are often malnourished in smaller organizations. Applying this to the JCR, it is my belief that investing time and energy into keeping Trinity Halls' IT systems fast and reliable will not just improve the quality of life for all residents, but also help every officer organize bigger and better opportunities and events.

I have a number of actionable ideas that would help modernize Trinity Halls.

1. Online system for reserving public spaces (music room, television room, games room)
  - a. The public spaces at Trinity Hall are wonderful, but I often see them empty or unused. A clear, reliable system for reserving these spaces would promote more activities on the halls campus and allow for greater control of who can use these resources and when.
2. Anonymous Online Idea Box
  - a. While Halls events will always be fun, giving residents a voice in which events are put on would not only include every resident in the event making process, but it would also give the events organizers a wealth of ideas to draw from when needed.

To achieve these goals I plan to draw on my knowledge of software development as a JF computer science major. Additionally, Halls is full of smart, driven students, and drawing on this strength will be key to my success. My philosophy is one of inclusion, and I extend that to any project or group that I work in. Giving Halls residents an outlet to express their wants and needs not just in regards to the Halls IT systems but to Trinity Halls as a whole would create a more connected and active community. While my goals and ideas are sure to evolve during my time as tech officer, I will stay grounded in these core values of inclusivity and connection.
